Professional Summary

Full Stack Developer with **3+ years of experience** building fintech web applications using **React, TypeScript, Java Spring Boot, and MySQL**. Experienced in **REST API development**, lending workflow automation, and migrating stored-procedure-based logic to **Spring Data JPA/Hibernate**. Builds **Docker-based CI/CD pipelines** for deployments to **Azure Kubernetes Service (AKS)** and owns end-to-end **VAPT** engagements across frontend and backend systems.

Technical Skills

Frontend: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Ant Design, shadcn/ui, Redux Toolkit, Redux-Saga, Axios, Vite, Webpack
Backend: Java, Spring Boot, REST API Design, Maven, JWT Authentication
Database: MySQL, MSSQL
Tools & Platforms: Git, GitHub Actions, CI/CD Pipelines, Jira, Postman, Agile/Scrum

Professional Experience

Full Stack Developer June 2023 – Present
IIFL Finance *Mumbai, India*

- Designed and developed scalable, responsive user interfaces and migrated **8+ legacy modules** to a modern **React + TypeScript** stack for IIFL's digital lending platform, supporting **INR 5,000 Cr+ AUM** and **INR 300 Cr+ monthly** disbursals.
- Built full-stack features for end-to-end lending automation including **loan underwriting**, **KYC verification**, **agreement signing**, and **mandate processing** using **React**, **Redux Toolkit**, **Redux-Saga**, and **RESTful APIs**, reducing manual interventions by **60%**.
- Developed and maintained **Java Spring Boot REST APIs**, implementing service-layer business logic and **MySQL** database operations for loan management features.
- Migrated stored-procedure-based database logic to **Spring Data JPA and Hibernate** in **Spring Boot**, moving data access into repositories and business logic into the service layer.
- Integrated third-party financial APIs including **TransUnion CIBIL**, **FinBox**, **Sentinel**, and **Phonon** on the frontend, orchestrating data flow between services and improving overall API response efficiency.
- Owned and drove the **end-to-end VAPT engagement** across both **frontend and backend** systems coordinating with internal security teams and external auditors, participating directly in audit cycles, and driving remediation of high-risk findings to closure in alignment with **OWASP standards** and regulatory compliance requirements
- **Containerized React applications using Docker** and built **CI/CD pipelines** to automate image builds, publish to **Azure Container Registry (ACR)**, and deploy to **Azure Kubernetes Service (AKS)**, with **rolling deployments, automatic rollback on rollout failure**, and deployment metadata logging for auditability.
- Conducted **UAT across 3 business-critical modules**, resolved production bugs under live conditions, and maintained **zero major rollback incidents** across all deployments.
- Collaborated with **5 cross-functional teams** (product, backend, QA, compliance, ops) via **Jira** and Agile ceremonies, ensuring consistent on-time sprint delivery.
- Used **GitHub Copilot** and **AI-assisted code generation** to generate boilerplate code and streamline routine development tasks.

Projects

WhatTheCron: Cron Expression Builder and AI Translator GitHub
Next.js, TypeScript, shadcn/ui, Tailwind CSS

- Built a full-stack, two-way **cron expression translator** with a visual field builder (cron → plain English) and **AI/LLM-powered** natural language input (English → cron) via the **Gemini API**, integrating a third-party AI service into a production-style workflow.
- Implemented a **Next.js Route Handler** as a secure server-side proxy for Gemini API calls, keeping API keys server-only, with robust **input validation** and **REST-based** error handling.

Education

Thadomal Shahani Engineering College **2021 – 2023**
*Bachelor of Technology in Computer Engineering | CGPA: **9.58 / 10*** *Mumbai, India*

Shri Bhagubhai Mafatlal Polytechnic **2017 – 2020**
*Diploma in Computer Engineering | **94.80%*** *Mumbai, India*
